Chapter 5
Working with Microsoft Virtual Server 2005
September 2015

Today, Hyper-V has made Microsoft Virtual Server 2005 obsolete and it is no longer supported on later version of Windows. However, if student computers are running Windows XP, the product is still available as a free download from Microsoft by following the procedure described in Activity 1-5.

Because Virtual Server 2005 is not compatible with current Windows versions we recommend that you skip this chapter if student computers are running Windows Vista or higher.
